

Clinical Education Contributor Guide

Independent learning for healthcare professionals

Clinical Education welcomes original educational contributions from healthcare professionals. This guide explains the standards expected when proposing an article, course, learning module, assessment resource or news item.

What you may submit

Articles, course or module proposals, assessment material, clinical education resources and news suggestions may be considered. A proposal does not guarantee publication.

Originality and previous publication

Submissions should be your own work and should not have been published elsewhere unless this is declared and agreed with the editor. Do not submit copyrighted material you are not authorised to reproduce.

Academic and source standards

Use primary sources where possible, distinguish evidence from opinion, provide direct references and declare relevant conflicts of interest. Clinical material should identify the guideline or evidence version used and remind readers to check current primary guidance, local policy and patient-specific factors.

Confidentiality

Do not include patient-identifiable information, confidential employment information, private correspondence or material you are not authorised to share.

AI-assisted drafting

If generative AI materially assisted drafting, editing, image creation or reference discovery, tell the editor. The named contributor remains responsible for accuracy, originality, source checking and authorship.

Submitting a file

The online form accepts one DOCX or PDF file up to 10 MB. You may also send material directly to the editor at email@sasdoctors.com.

Editorial review

The editor may request revisions, decline material, edit for house style, or request further source verification. Publication decisions remain editorial decisions and acceptance is not automatic.

Preparation checklist

Check that the title is clear; the intended audience is stated; learning objectives are explicit where relevant; claims are referenced; sources are current; conflicts are declared; confidentiality is protected; and the material has been proofread.
